#### Affno

Software Trainee | October, 2016 - 2017

- Built 3 augmented reality applications for the company
- Worked on Research and development software project on Augmented reality
- Worked on a project on an indoor positioning system.

### RELEVANT PROJECTS:

---

#### Netflix Clone

Created a Netflix clone using React JS. All the data are grabbed from [moviedb.org](https://www.moviedb.org) using an API. The code can be found on [GitHub](#). Website is hosted on firebase. The technologies and tools that I used are,

- React
- Firebase

#### Elife Network Online Feedback Web Application

I have built this web application to send feedback on the customer service provided by the company. You can add the customer name and select the dealer from the list of dealers, then rate his service from 1 to 10. After that, you can submit the form with text feedback. The feedback will be sent to the company email address. The code is on [GitHub](#). Used technologies and tools are,

- Python
- Flask
- Heroku
- SQLAlchemy
- PostgreSQL
- Mailtrap

#### Blog Website Built Using Python, Flask

I have built this website as a blog website where users can register and manage their own accounts and also post content with images and update, or delete them. This website is entirely built using python, flask, and a few python libraries are installed to manage the website's functionalities. It is hosted on shared hosting using Cpanel and also the database is MySQL. The code is on [GitHub](#). You can use "testuser@demo.com", "testuser123" as the demo login credentials. Used technologies and tools are,

- Python
- Flask
- SQLAlchemy
- MySQL
